

EMERALD ASH BORER HAS BEEN DISCOVERED IN ST. CLAIR

St. Clair residents are encouraged to look for signs of Emerald Ash Borer (EAB).

The Minnesota Department of Agriculture (MDA) confirmed an emerald ash borer (EAB) infestation in the City of St. Clair. A local resident reported tell-tale signs of possible EAB infestation to Randy Schindle, DNR Forester, who contacted the MDA for confirmation.

Spring is the perfect time to look for woodpecker damage and other signs of emerald ash borer because the trees are still bare. There are several things residents should look for when checking for emerald ash borer.

- **BE SURE YOU HAVE IDENTIFIED AN ASH TREE** – this is an important first step since EAB only feeds on ash trees. Ash trees have opposite branching ... meaning branches come off the trunk directly across from each other. On older trees, the bark is in a tight, diamond-shaped pattern. Younger trees have a relatively smooth bark.
- **LOOK FOR WOODPECKER DAMAGE** – woodpeckers like EAB larvae and woodpecker holes may indicate the presence of EAB.
- **CHECK FOR BARK CRACKS** – EAB larvae tunneling under the bark can cause the bark to split open, revealing the larval (S-shaped) tunnels underneath.
- **CONTACT A PROFESSIONAL** – if you feel your ash tree may be infested with EAB, contact a tree care professional, your city forester, or the MDA at arrest.the.pest@state.mn.us or 888-545-6684 (voicemail).

Emerald ash borer larvae kill ash trees by tunneling under the bark and feeding on the part of the tree that moves nutrients up and down the trunk. Minnesota is highly susceptible to the destruction caused by this invasive insect. The state has approximately one billion ash trees, the most of any state in the nation.

The biggest risk of spreading EAB comes from people unknowingly moving firewood or other ash products harboring larvae. There are three (3) easy steps residents can take to keep EAB from spreading:

1. **DON'T TRANSPORT FIREWOOD** – buy firewood locally from approved vendors, and burn it where you buy it;
2. **BE AWARE OF THE QUARANTINE RESTRICTIONS** – if you live in a quarantined county, be aware of the restrictions on movement of products such as ash trees, wood chips, and firewood; and,
3. **WATCH YOUR ASH TREES FOR INFESTATION** – if you think your ash tree is infested, go to www.mda.state.mn.us/eab and use the guide “Does my tree have emerald ash borer?”

For more information on emerald ash borer, go to www.mda.state.mn.us/eab.

Randy Schindle, DNR Forestry, will be hosting a walk-through at Memorial Park in St. Clair on **THURSDAY, APRIL 8th at 6 pm**. Mr. Schindle will show interested residents how to identify ash trees, how to tell if an ash tree is infested, and to answer questions relating to Emerald Ash Borer.

The MN Dept. of Agriculture (MDA) will host an Emerald Ash Borer webinar on **WEDNESDAY, APRIL 21st from 10 am – 11 am and again from 6:30 pm – 7:30 pm**.

To register for one of the webinars visit the MN Dept. of Agriculture website www.mda.state.mn.us/eab or visit the City of St. Clair website www.stclair.govoffice2.com and click on the Emerald Ash Borer link.
